1 Contest Setup

1.1 vimrc

```

1 set number          " Show line numbers
2 set mouse=a         " Enable inaction via mouse
3 set showmatch       " Highlight matching brace
4 set cursorline      " Show underline
5 set cursorcolumn    " highlight vertical column
6
7 filetype on "enable file detection
8 syntax on  "syntax highlight
9
10 set autoindent      " Auto-indent new lines
11 set shiftwidth=4    " Number of auto-indent spaces
12 set smartindent     " Enable smart-indent
13 set smarttab        " Enable smart-tabs
14 set tabstop=4       " Number of spaces per Tab
15
16 " -----Optional-----
17
18 set undolevels=10000 " Number of undo levels
19 set scrolloff=5      " Auto scroll
20
21 set hlsearch        " Highlight all search results
22 set smartcase       " Enable smart-case search
23 set ignorecase      " Always case-insensitive
24 set incsearch       " Searches for strings incrementally
25
26 highlight Comment ctermfg=cyan
27 set showmode
28
29 set encoding=utf-8
30 set fileencoding=utf-8
31 set scriptencoding=utf-8

```

1.2 bashrc

```

1 alias g++="g++ -Wall -Wextra -std=c++11 -O2"

```

1.3 Grep Error and Warnings

```
1 | g++ main.cpp 2>&1 | grep -E 'warning|error'
```

1.4 C++ template

```
1 | #include <bits/stdc++.h>
2 |
3 | using namespace std;
4 |
5 | typedef long long int ll;
6 | typedef pair<int, int> ii;
7 |
8 | int main()
9 | {
10 |     return 0;
11 | }
```

1.5 Java template

```
1 | import java.io.*;
2 | import java.util.*;
3 |
4 | public class Main
5 | {
6 |     public static void main(String[] args)
7 |     {
8 |         MyScanner sc = new MyScanner();
9 |         out = new PrintWriter(new BufferedOutputStream(System.out));
10 |         // Start writing your solution here.
11 |
12 |         // Stop writing your solution here.
13 |         out.close();
14 |     }
15 |
16 |     public static PrintWriter out;
17 |
18 |     public static class MyScanner
19 |     {
20 |         BufferedReader br;
21 |         StringTokenizer st;
22 |
23 |         public MyScanner()
24 |         {
25 |             br = new BufferedReader(new InputStreamReader(System.in));
26 |         }
27 |
28 |         boolean hasNext()
29 |         {
30 |             while (st == null || !st.hasMoreElements()) {
31 |                 try {
32 |                     st = new StringTokenizer(br.readLine());
33 |                 } catch (Exception e) {
34 |                     return false;
```

```
35 |                 }
36 |             }
37 |             return true;
38 |         }
39 |
40 |         String next()
41 |         {
42 |             if (hasNext())
43 |                 return st.nextToken();
44 |             return null;
45 |         }
46 |
47 |         int nextInt()
48 |         {
49 |             return Integer.parseInt(next());
50 |         }
51 |
52 |         long nextLong()
53 |         {
54 |             return Long.parseLong(next());
55 |         }
56 |
57 |         double nextDouble()
58 |         {
59 |             return Double.parseDouble(next());
60 |         }
61 |
62 |         String nextLine()
63 |         {
64 |             String str = "";
65 |             try {
66 |                 str = br.readLine();
67 |             } catch (IOException e) {
68 |                 e.printStackTrace();
69 |             }
70 |             return str;
71 |         }
72 |     }
73 | }
```

1.5.1 Java Issues

1. Random Shuffle before sorting: `Random rnd = new Random(); rnd.nextInt();`
2. Use StringBuilder for large output
3. Java has strict parsing rules. e.g. using `sc.nextInt()` to read a long will result in RE
4. For class sorting, use code: `implements Comparable<Class name>`. Or, use code: `new Comparator<Interval>() {}` at `Collections.sort()` second argument

2 System Testing

1. Setup bashrc and vimrc
2. Install Java 8, Eclipse 32-bit, g++ compiler
3. Remove Chinese input method
4. Look for compilation parameter and code it into bashrc
5. Test if c++ and java templates work properly on local and judge machine
6. Test "divide by 0" → RE/TLE?
7. Make a complete graph and run Floyd warshall, to test time complexity upper bound

8. Make a linear graph and use DFS to test stack size
9. Test output with extra newline and spaces

3 Reminder

1. 隊友的建議，要認真聽！通常隊友的建議都會突破你盲點
2. Read the problem statements carefully. Input and output specifications and constraints are crucial!
3. Estimate the **time complexity** and **memory complexity** carefully.
4. Time penalty is 20 minutes per WA, **don't rush!**
5. Sample test cases must all be tested and passed before every submission!
6. Test the corner cases, such as 0, 1, -1. Test all edge cases of the input specification.
7. Bus error: the code has *scanf*, *fgets* but have nothing to read! Check if you have early termination but didn't handle it properly.
8. Binary search? 數學算式移項合併後查詢?
9. Two Pointer <-> Binary Search
10. Directed graph connectivity -> DFS. Undirected graph -> Union Find
11. Check connectivity of the graph if the problem statement doesn't say anything (just loop over all nodes!)
12. *longlong* = *int * int* won't work!
13. Shifting for *longlongint* should be something like *1LL << 35*
14. For continuous input problems, be sure to read in all input BEFORE terminating and start processing next the input.
15. Don't use anonymous struct
16. 因式分解
17. 有時候，從答案推回來會容易些！
18. 寫出數學式，有時就馬上出現答案了！

4 Topic list

1. enumeration
2. greedy
3. sorting, topological sort
4. binary search
5. 離散化
6. Dynamic programming, 矩陣快速幂
7. Pigeonhole
8. LCA (倍增法, LCA 轉 RMQ)
9. 折半完全列舉 (能用 vector 就用 vector)
10. Offline (DFS, LCA)

5 Useful code

5.1 Leap year $O(1)$

```
1 || year % 400 == 0 || (year % 4 == 0 && year % 100 != 0)
```

5.2 Fast Exponentiation $O(\log(\exp))$

Fermat's little theorem: 若 m 是質數，則 $a^{m-1} \equiv 1 \pmod{m}$

```
1 || ll fast_pow(ll a, ll b, ll M) {
2     ll ans = 1;
3     ll base = a % M;
4     while (b) {
5         if (b & 1)
6             ans = ans * base % M;
7         base = base * base % M;
8         b >>= 1;
9     }
```

```
9     }
10    return ans;
11 }
```

5.3 Mod Inverse $O(\log n)$

Case 1: $\gcd(a, m) = 1$: $ax + my = \gcd(a, m) = 1$ (use `ext_gcd`)

Case 2: m is prime: $a^{m-2} \equiv a^{-1} \pmod{m}$

5.4 GCD $O(\log(\min(a + b)))$

注意負數的 case! C++ 是看被除數決定正負號的。

```
1 || ll gcd(ll a, ll b)
2 {
3     return b == 0 ? a : gcd(b, a % b);
4 }
```

5.5 Extended Euclidean Algorithm GCD $O(\log(\min(a + b)))$

Bezout identity $ax + by = \gcd(a, b)$, where $\gcd(a, b)$ is the smallest positive integer that can be written as $ax + by$, and every integer of the form $ax + by$ is a multiple of $\gcd(a, b)$.

```
1 || ll extgcd(ll a, ll b, ll& x, ll& y) {
2     if (b == 0) {
3         x = 1;
4         y = 0;
5         return a;
6     }
7     else {
8         ll d = extgcd(b, a % b, y, x);
9         y -= (a / b) * x;
10        return d;
11    }
12 }
```

5.6 Prime Generator $O(n \log \log n)$

```
1 || const ll MAX_NUM = 1e6; // 要是合數
2 || bool is_prime[MAX_NUM];
3 || vector<ll> primes;
4
5 || void init_primes() {
6 ||     fill(is_prime, is_prime + MAX_NUM, true);
7 ||     is_prime[0] = is_prime[1] = false;
8 ||     for (ll i = 2; i < MAX_NUM; i++) {
9 ||         if (is_prime[i]) {
10 ||             primes.push_back(i);
11 ||             for (ll j = i * i; j < MAX_NUM; j += i)
12 ||                 is_prime[j] = false;
13 ||         }
14 ||     }
15 || }
```

5.7 C++ Reference

```

```

6 Search

6.1 Ternary Search $O(n \log n)$

```

1 double l = ..., r = ....; // input
2 for(int i = 0; i < 100; i++) {
3     double m1 = l + (r - l) / 3, m2 = r - (r - l) / 3;
4     if (f(m1) < f(m2)) // f - convex function
5         l = m1;
6     else
7         r = m2;
8 }
9 f(r) - maximum of function

```

6.2 Two-pointer 爬行法 (右跑左追)

6.3 N Puzzle

```

1 const int dr[4] = {0, 0, +1, -1};
2 const int dc[4] = {+1, -1, 0, 0};
3 const int dir[4] = {'R', 'L', 'D', 'U'};

```

9.3 CC

9.3.1 BCC

以 Edge 做分界的話, stack 要裝入 (u - v), 並 pop 終止條件為 != (u - v)
以 Articulation point 做為分界 (code below), 注意有無坑人的重邊

```

1 int cnt, root, dfsTime[N], dfsLow[N], timer, group[N]; // max N nodes
2 stack<int> s;
3 bool in[N];
4 void dfs(int u, int p)
5 {
6     s.push(u);
7     in[u] = true;
8
9     dfsTime[u] = dfsLow[u] = timer++;
10
11     for (int i = 0; i < (int)g[u].size(); i++) {
12         int v = g[u][i];
13
14         if (v == p)
15             continue;
16
17         if (dfsTime[v] == 0) {

```

```

18     dfs(v, u);
19     dfsLow[u] = min(dfsLow[u], dfsLow[v]);
20 } else {
21     if (in[u]) // gain speed
22         dfsLow[u] = min(dfsLow[u], dfsTime[v]);
23 }
24 }
25
26 if (dfsTime[u] == dfsLow[u]) { //dfsLow[u]== dfsTime[u] -> SCC
    found
27     cnt++;
28     while (true) {
29         int v = s.top();
30         s.pop();
31         in[v] = false;
32
33         group[v] = cnt;
34         if (v == u)
35             break;
36     }
37 }
38 }
39
40 // get SCC degree
41 int deg[n + 1];
42 memset(deg, 0, sizeof(deg));
43 for (int i = 1; i <= n; i++) {
44     for (int j = 0; j < (int)g[i].size(); j++) {
45         int v = g[i][j];
46         if (group[i] != group[v])
47             deg[group[i]]++;
48     }
49 }

```

9.3.2 SCC

First of all we run DFS on the graph and sort the vertices in decreasing of their finishing time (we can use a stack).

Then, we start from the vertex with the greatest finishing time, and for each vertex v that is not yet in any SCC, do : for each u that v is reachable by u and u is not yet in any SCC, put it in the SCC of vertex v . The code is quite simple.

```

1  const int MAX_V = ...;
2  const int INF = 0x3f3f3f3f;
3  int V;
4  vector<int> g[MAX_V];
5
6  int dfn_idx = 0;
7  int scc_cnt = 0;
8  int dfn[MAX_V];
9  int low[MAX_V];
10 int belong[MAX_V];
11 bool in_st[MAX_V];
12 vector<int> st;
13
14 void scc(int v) {
15     dfn[v] = low[v] = dfn_idx++;

```

```

18                 d[v] = d[u] + w;
19             }
20         }
21
22         if (i == n - 1 && hasChange == true)
23             loop = true;
24         else if (hasChange == false)
25             break;
26     }
27 }

```

9.4.4 Floyd-Warshall $O(V^3)$

The graph is stored using adjacency matrix. The initial state is *diagonal* = 0 and *others* = *INF*. (If *INF* is int, use long long for the matrix)
If diagonal numbers are negative \leftarrow cycle .

```

1 for(int k = 0; k < N; k++)
2     for(int i = 0; i < N; i++)
3         for(int j = 0; j < N; j++)
4             dp[i][j] = min(dp[i][j], dp[i][k] + dp[k][j]);

```

9.5 MST

9.5.1 Kruskal

1. Store the graph by *(weight, (from, to))*
2. Sort the graph by *weight*
3. Start from the smallest weight, and keep adding edges that won't form a cycle with the current MST set
4. Early termination condition: $n - 1$ edges has been added, NOT size of the union-find set

9.5.2 Prim

```

1 int ans = 0;
2 bool used[n];
3 memset(used, false, sizeof(used));
4
5 priority_queue<ii, vector<ii>, greater<ii>> pq;
6 pq.push(ii(0, 0)); // push (0, origin)
7 while (!pq.empty())
8 {
9     ii cur = pq.top();
10    pq.pop();
11
12    int u = cur.second;
13    if (used[u])
14        continue;
15    ans += cur.first;
16    used[u] = true;
17
18    for (int i = 0; i < (int)g[u].size(); i++) {
19        int v = g[u][i].first, w = g[u][i].second;
20        if (used[v] == false)
21            pq.push(ii(w, v));
22    }
23 }

```

```

1  ll binomialCoeff(ll n, ll k)
2  {
3      ll res = 1;
4
5      if ( k > n - k ) // Since C(n, k) = C(n, n-k)
6          k = n - k;
7
8      for (int i = 0; i < k; ++i) // n...n-k / 1...k
9      {
10         res *= (n - i);
11         res /= (i + 1);
12     }
13
14     return res;
15 }

```

14.6 Chinese remainder theorem

```

1  typedef long long ll;
2
3  struct Item {
4      ll m, r;
5  };
6
7  ll extgcd(ll a, ll b, ll &x, ll &y)
8  {
9      if (b == 0) {
10         x = 1;
11         y = 0;
12         return a;
13     } else {
14         ll d = extgcd(b, a % b, y, x);
15         y -= (a / b) * x;
16         return d;
17     }
18 }
19
20 Item extcrt(const vector<Item> &v)
21 {
22     ll m1 = v[0].m, r1 = v[0].r, x, y;
23
24     for (int i = 1; i < int(v.size()); i++) {
25         ll m2 = v[i].m, r2 = v[i].r;
26         ll g = extgcd(m1, m2, x, y); // now x = (m/g)^(-1)
27
28         if ((r2 - r1) % g != 0)
29             return {-1, -1};
30
31         ll k = (r2 - r1) / g * x % (m2 / g);
32         k = (k + m2 / g) % (m2 / g); // for the case k is negative
33
34         ll m = m1 * m2 / g;
35         ll r = (m1 * k + r1) % m;
36
37         m1 = m;

```

```

38     r1 = (r + m) % m; // for the case r is negative
39 }
40
41 return (Item) {
42     m1, r1
43 };
44 }

```

14.7 2-Circle relations

d = 圓心距, R, r 為半徑 ($R \geq r$)

內切: $d = R - r$

外切: $d = R + r$

內離: $d < R - r$

外離: $d > R + r$

相交: $d < R + r$ 且 $d > R - r$

14.8 Fun Facts

1. 如果 $\frac{b}{a}$ 是最簡分數, 則 $1 - \frac{b}{a}$ 也是
- 2.

```

Trig Cheat Sheet

Definition of the Trig Functions

Right triangle definition

For this definition we assume that

$$0 < \theta < \frac{\pi}{2} \text{ or } 0^\circ < \theta < 90^\circ.$$

$$\begin{aligned}\sin \theta &= \frac{\text{opposite}}{\text{hypotenuse}} & \csc \theta &= \frac{\text{hypotenuse}}{\text{opposite}} \\ \cos \theta &= \frac{\text{adjacent}}{\text{hypotenuse}} & \sec \theta &= \frac{\text{hypotenuse}}{\text{adjacent}} \\ \tan \theta &= \frac{\text{opposite}}{\text{adjacent}} & \cot \theta &= \frac{\text{adjacent}}{\text{opposite}}\end{aligned}$$

Unit circle definition

For this definition θ is any angle.

$$\begin{aligned}\sin \theta &= \frac{y}{1} = y & \csc \theta &= \frac{1}{y} \\ \cos \theta &= \frac{x}{1} = x & \sec \theta &= \frac{1}{x} \\ \tan \theta &= \frac{y}{x} & \cot \theta &= \frac{x}{y}\end{aligned}$$

Facts and Properties

Domain

The domain is all the values of θ that can be plugged into the function.

$$\begin{aligned}\sin \theta, \quad \theta &\text{ can be any angle} \\ \cos \theta, \quad \theta &\text{ can be any angle} \\ \tan \theta, \quad \theta &\neq \left(n + \frac{1}{2}\right)\pi, \quad n = 0, \pm 1, \pm 2, \dots \\ \csc \theta, \quad \theta &\neq n\pi, \quad n = 0, \pm 1, \pm 2, \dots \\ \sec \theta, \quad \theta &\neq \left(n + \frac{1}{2}\right)\pi, \quad n = 0, \pm 1, \pm 2, \dots \\ \cot \theta, \quad \theta &\neq n\pi, \quad n = 0, \pm 1, \pm 2, \dots\end{aligned}$$

Range

The range is all possible values to get out of the function.

$$\begin{aligned}-1 \leq \sin \theta \leq 1 & \quad \csc \theta \geq 1 \text{ and } \csc \theta \leq -1 \\ -1 \leq \cos \theta \leq 1 & \quad \sec \theta \geq 1 \text{ and } \sec \theta \leq -1 \\ -\infty < \tan \theta < \infty & \quad -\infty < \cot \theta < \infty\end{aligned}$$

Period

The period of a function is the number, T , such that $f(\theta + T) = f(\theta)$. So, if ω is a fixed number and θ is any angle we have the following periods.

$$\begin{aligned}\sin(\omega\theta) &\rightarrow T = \frac{2\pi}{\omega} \\ \cos(\omega\theta) &\rightarrow T = \frac{2\pi}{\omega} \\ \tan(\omega\theta) &\rightarrow T = \frac{\pi}{\omega} \\ \csc(\omega\theta) &\rightarrow T = \frac{2\pi}{\omega} \\ \sec(\omega\theta) &\rightarrow T = \frac{2\pi}{\omega} \\ \cot(\omega\theta) &\rightarrow T = \frac{\pi}{\omega}\end{aligned}$$

Formulas and Identities

Tangent and Cotangent Identities

$$\tan \theta = \frac{\sin \theta}{\cos \theta} \quad \cot \theta = \frac{\cos \theta}{\sin \theta}$$

Reciprocal Identities

$$\begin{aligned}\csc \theta &= \frac{1}{\sin \theta} & \sin \theta &= \frac{1}{\csc \theta} \\ \sec \theta &= \frac{1}{\cos \theta} & \cos \theta &= \frac{1}{\sec \theta} \\ \cot \theta &= \frac{1}{\tan \theta} & \tan \theta &= \frac{1}{\cot \theta}\end{aligned}$$

Pythagorean Identities

$$\sin^2 \theta + \cos^2 \theta = 1$$

$$\tan^2 \theta + 1 = \sec^2 \theta$$

$$1 + \cot^2 \theta = \csc^2 \theta$$

Even/Odd Formulas

$$\begin{aligned}\sin(-\theta) &= -\sin \theta & \csc(-\theta) &= -\csc \theta \\ \cos(-\theta) &= \cos \theta & \sec(-\theta) &= \sec \theta \\ \tan(-\theta) &= -\tan \theta & \cot(-\theta) &= -\cot \theta\end{aligned}$$

Periodic Formulas

If n is an integer.

$$\sin(\theta + 2\pi n) = \sin \theta \quad \csc(\theta + 2\pi n) = \csc \theta$$

$$\cos(\theta + 2\pi n) = \cos \theta \quad \sec(\theta + 2\pi n) = \sec \theta$$

$$\tan(\theta + \pi n) = \tan \theta \quad \cot(\theta + \pi n) = \cot \theta$$

Double Angle Formulas

$$\sin(2\theta) = 2\sin \theta \cos \theta$$

$$\cos(2\theta) = \cos^2 \theta - \sin^2 \theta$$

$$= 2\cos^2 \theta - 1$$

$$= 1 - 2\sin^2 \theta$$

$$\tan(2\theta) = \frac{2\tan \theta}{1 - \tan^2 \theta}$$

Degrees to Radians Formulas

If x is an angle in degrees and t is an angle in radians then

$$\frac{\pi}{180} = \frac{t}{x} \quad \Rightarrow \quad t = \frac{\pi x}{180} \quad \text{and} \quad x = \frac{180t}{\pi}$$

Half Angle Formulas (alternate form)

$$\sin \frac{\theta}{2} = \pm \sqrt{\frac{1 - \cos \theta}{2}} \quad \sin^2 \theta = \frac{1}{2}(1 - \cos(2\theta))$$

$$\cos \frac{\theta}{2} = \pm \sqrt{\frac{1 + \cos \theta}{2}} \quad \cos^2 \theta = \frac{1}{2}(1 + \cos(2\theta))$$

$$\tan \frac{\theta}{2} = \pm \sqrt{\frac{1 - \cos \theta}{1 + \cos \theta}} \quad \tan^2 \theta = \frac{1 - \cos(2\theta)}{1 + \cos(2\theta)}$$

Sum and Difference Formulas

$$\sin(\alpha \pm \beta) = \sin \alpha \cos \beta \pm \cos \alpha \sin \beta$$

$$\cos(\alpha \pm \beta) = \cos \alpha \cos \beta \mp \sin \alpha \sin \beta$$

$$\tan(\alpha \pm \beta) = \frac{\tan \alpha \pm \tan \beta}{1 \mp \tan \alpha \tan \beta}$$

Product to Sum Formulas

$$\sin \alpha \sin \beta = \frac{1}{2}[\cos(\alpha - \beta) - \cos(\alpha + \beta)]$$

$$\cos \alpha \cos \beta = \frac{1}{2}[\cos(\alpha - \beta) + \cos(\alpha + \beta)]$$

$$\sin \alpha \cos \beta = \frac{1}{2}[\sin(\alpha + \beta) + \sin(\alpha - \beta)]$$

$$\cos \alpha \sin \beta = \frac{1}{2}[\sin(\alpha + \beta) - \sin(\alpha - \beta)]$$

Sum to Product Formulas

$$\sin \alpha + \sin \beta = 2\sin\left(\frac{\alpha + \beta}{2}\right)\cos\left(\frac{\alpha - \beta}{2}\right)$$

$$\sin \alpha - \sin \beta = 2\cos\left(\frac{\alpha + \beta}{2}\right)\sin\left(\frac{\alpha - \beta}{2}\right)$$

$$\cos \alpha + \cos \beta = 2\cos\left(\frac{\alpha + \beta}{2}\right)\cos\left(\frac{\alpha - \beta}{2}\right)$$

$$\cos \alpha - \cos \beta = -2\sin\left(\frac{\alpha + \beta}{2}\right)\sin\left(\frac{\alpha - \beta}{2}\right)$$

Cofunction Formulas

$$\sin\left(\frac{\pi}{2} - \theta\right) = \cos \theta \quad \cos\left(\frac{\pi}{2} - \theta\right) = \sin \theta$$

$$\csc\left(\frac{\pi}{2} - \theta\right) = \sec \theta \quad \sec\left(\frac{\pi}{2} - \theta\right) = \csc \theta$$

$$\tan\left(\frac{\pi}{2} - \theta\right) = \cot \theta \quad \cot\left(\frac{\pi}{2} - \theta\right) = \tan \theta$$

Unit Circle

For any ordered pair on the unit circle (x, y) : $\cos \theta = x$ and $\sin \theta = y$

Example

$$\cos\left(\frac{5\pi}{3}\right) = \frac{1}{2} \quad \sin\left(\frac{5\pi}{3}\right) = -\frac{\sqrt{3}}{2}$$

Inverse Trig Functions

Definition

$y = \sin^{-1} x$ is equivalent to $x = \sin y$

$y = \cos^{-1} x$ is equivalent to $x = \cos y$

$y = \tan^{-1} x$ is equivalent to $x = \tan y$

Inverse Properties

$$\cos(\cos^{-1}(x)) = x \quad \cos^{-1}(\cos(\theta)) = \theta$$

$$\sin(\sin^{-1}(x)) = x \quad \sin^{-1}(\sin(\theta)) = \theta$$

$$\tan(\tan^{-1}(x)) = x \quad \tan^{-1}(\tan(\theta)) = \theta$$

Domain and Range

Function	Domain	Range
$y = \sin^{-1} x$	$-1 \leq x \leq 1$	$-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}$
$y = \cos^{-1} x$	$-1 \leq x \leq 1$	$0 \leq y \leq \pi$
$y = \tan^{-1} x$	$-\infty < x < \infty$	$-\frac{\pi}{2} < y < \frac{\pi}{2}$

Alternate Notation

$$\sin^{-1} x = \arcsin x$$

$$\cos^{-1} x = \arccos x$$

$$\tan^{-1} x = \arctan x$$

Law of Sines, Cosines and Tangents

Law of Sines

$$\frac{\sin \alpha}{a} = \frac{\sin \beta}{b} = \frac{\sin \gamma}{c}$$

Law of Cosines

$$a^2 = b^2 + c^2 - 2bc \cos \alpha$$

$$b^2 = a^2 + c^2 - 2ac \cos \beta$$

$$c^2 = a^2 + b^2 - 2ab \cos \gamma$$

Mollweide's Formula

$$\frac{a+b}{c} = \frac{\cos \frac{1}{2}(\alpha - \beta)}{\sin \frac{1}{2}\gamma}$$

Law of Tangents

$$\frac{a-b}{a+b} = \frac{\tan \frac{1}{2}(\alpha - \beta)}{\tan \frac{1}{2}(\alpha + \beta)}$$

$$\frac{b-c}{b+c} = \frac{\tan \frac{1}{2}(\beta - \gamma)}{\tan \frac{1}{2}(\beta + \gamma)}$$

$$\frac{a-c}{a+c} = \frac{\tan \frac{1}{2}(\alpha - \gamma)}{\tan \frac{1}{2}(\alpha + \gamma)}$$
